

GEM
Commercial Group

Gem Trading Company is the leading producer of sanitary ware in the Middle East, offering a diverse range of the most beautiful and valuable products. The most significant reasons why Gem products are popular is their beautiful design and high-quality raw materials which have led to the rapid increase in the number of its customers worldwide.

Products

Toilets

This type of toilet is suitable for all ages, especially people with back and leg injuries. The toilets produced by Gem come with high quality and strength and unique specifications . Drainage system includes cascade, vortex, waterjet, or turbojet . Considering the least possible water consumption , draining is done in the fastest time and without spraying. Furthermore, they have a flush tank mechanism and a double soft closed door. These types of toilet bowls are in oval, semi-oval and circular models.

Types of toilets

One-Piece toilet : The tank and the toilet bowl are connected and cannot be separated from each other.

Two-Piece toilet : The tank and the toilet bowl are separated from each other. Moreover, they are connected to each other by installing the bolts.

Tankless toilet : These types of toilets drain water through a built-in flush tank, inside the wall. They drain less and consume less water due to their drain tank as it is inside the wall. Tankless toilets are categorized into the following types.

Wall-hung toilet or wall mounted toilet : These types of toilets are placed on the wall; They are very strong and durable and can withstand overweight people. Their height from the floor is adjustable and these types of toilets are very popular in terms of their beauty.

Wall-Face toilets : These types of toilets are installed on the floor and the sewer pipe is inside the wall and the drainage operation is accomplished through the flush tank inside the wall.

Back-to-Wall toilets : This type of toilet is placed on the floor and the drainage operation is accomplished through the floor.

Medical toilet : These types of toilets have an arch and curve in their seating area also designed to fit the body ergonomically. Furthermore, it can make sitting and standing process easier in a proper position and relieves the pain in legs, back, knees and ankles. Drainage system is waterjet and turbojet type and are less clogged due to the larger output.

Corner toilet : These types of toilets take up little space and are installed in the corner of the bathroom or toilet. If you have a small space, these types are the best option for you.

Long-flush toilet tanks : These types of toilets are very attractive and the flush tank is connected in higher position from the toilet bowl and the water is directed into the bowl by pulling the chain.

Auto-cleaning toilet : Some toilets are equipped with a bidet or self-cleaning system, in order to become popular to use. The bidet is normally collected in a way that when the toilet bidet valve is opened, the bidet head comes out and without the manipulation of the hand, it performs the washing operation through water pressure. Different types of bidet toilets:

Automatic or electrical bidet : In this type of toilets, a handle including several control keys are placed next to the toilet and by pressing the wash button, it starts spraying water and by pressing the stop button, the drainage operation stops. Moreover, it has adjustment facilities such as water spray, deodorant, water pressure adjustment, etc. These types of toilets also have a drying system after the toilet lid closes in case of creating heat and hot air.

Manual or Mechanical bidet : In these types of toilets, the washing operation is performed by a faucet lever installed next to the toilet, and using this lever, pressure and water spray amount can be adjusted.

Squat toilets

Squat toilets are cleaner and less likely to transmit contaminants and germs. It is made of glossy glaze with proper thickness. Furthermore, they have hollow, semi-hollow and flat bowls with high resistance. Open rim squat and close rim squat toilets are their drain types. In the close rim type, water enters the toilet bowl through the holes located along the channel, and in the open rim type, water flows immediately after entering the channel in the toilet bowl. Waterproofing, beautiful design, and high-quality glaze are considered as significant specifications of these types of toilets.

Shower Pan

The shower pan is a few centimeters platform preventing water from spraying and directing the water to the outlet using drain and syphon. Gem shower pans are high-quality and durable product made of materials resistant to stroke and scratches with anti-slipping specifications. They contain adjustable legged system which can be set onto surfaces properly.
